

- ▶ Energy City is a 'real state developer' in the domain of energy companies.
- ▶ Their \$2.6 billion project in Doha, Qatar, is one of several planned across India, Kazakhstan and Libya.

Energy City: 'green' all through!

How they cut waste, increased efficiency, and protected profits.

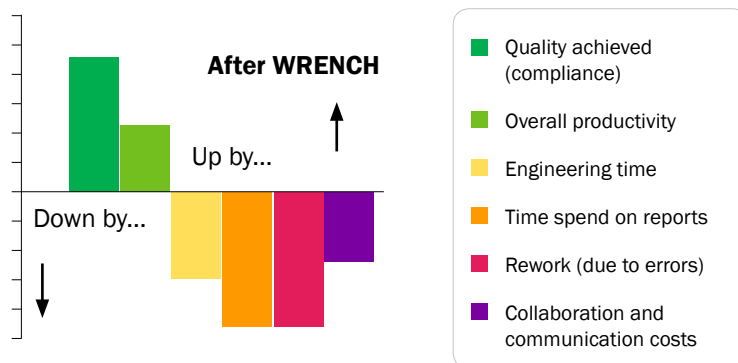

Energy City Qatar is the Middle East's first energy business centre, catering to the commercial, technical, and human resource needs of the oil and gas industry in the region. To streamline this mammoth undertaking, Energy City partnered with WRENCH Enterprise™ who as experts in project management technology brought several unique, unexpected, and competitive advantages to the table.

"We did not foresee how easy quality enforcement could be! We used to rely on random checks of our registers vs. folders and directories to see if both have been updated correctly. Now updation is both automatic and accurate. Bonus: no more old versions used by accident!"

**Project Manager,
Energy City - Qatar**

Why they chose WRENCH™?

Energy City needed a way to manage project documentation, monitor work and resources, and ensure quality in all project deliverables. By switching to WRENCH, they got all the above in a matter of weeks, plus an automated, intuitive, and waste-free working environment. Now their managers have complete control and complete security, with online access to latest project information - in real-time.

WRENCH™ streamlined and sped up (by up to 200%) functions like documentation management, correspondence management, report generation and transmittal, collaboration, work monitoring, ISO enforcement, and resource tracking, to mention a few. (Visit our website for the full story)

After experiencing WRENCH across a few select phases of project management, Energy City decided to extend WRENCH to the entire project cycle (including project scheduling, planning, etc.)
